

TEXL Completes Milestone 300th GE90 Overhaul

7 May 2016 is a special day for TEXL – the release of 300th GE90 110/115B engine output! This is certainly the moment worth celebrating! Establishing in 2008 with operations began in 2010, it is certainly a great achievement for TEXL to release its 300th engine output in such a short period of time.

‘To be a world class GE aircraft engine repair and overhaul facility’ has always been the vision of TEXL since TEXL and GE Aviation signed the GE Branded Service Agreement in 2008. Being the Authorized GE90™ Service Provider and GE90 Center of Excellence, TEXL has strong commitment to the continuous improvement in safety and quality mindset, operational excellence and service excellence. With such strong commitment and dedication, TEXL is able to release its 300th Engine Output in eight years. While the 100th Engine Output was in December 2013, TEXL is now celebrating its 300th Engine Output in less than two and a half years.

TEXL celebrates the completion of its 300th GE90-110/115B engine output.
